

Green Cleaning

Eco-conscious Tools, Mops & Cleaning Solutions

Micronova®

Go GREEN with Micronova's Green Cleaning line of eco-conscious cleaning products, including recyclable tools, reusable and recyclable mops, lead-free tape, and biodegradable solutions for your clean environment.

Green cleaning is a method of cleaning that emphasizes the use of environmentally friendly products and practices. It involves using products and techniques that minimize the release of harmful particles and chemicals into the air or environment. This is particularly important in cleanroom environments where the presence of even small amounts of contaminants can compromise the cleanliness of the space.
